INFO-CENTRE FEATURES

1. Accepts information from multiple sources in various data formats such as texts, dry contacts, Nurse Call Systems, Wander Alert Systems, or raw data from other third party software applications.
2. Multiple display formats for predefined incoming messages.
3. Multiple display resolutions for wide screen or letter box monitors or televisions.
4. Processed messages can be distributed through computer monitors, televisions, pocket pagers, phones, emails or dry contacts output.
5. Unit can be set as a host or client for a distributed installation (multiple areas with different displayed information).
6. Hosts and clients can be inter-connected via RS232, RS485 or LAN networks.
7. Industrial System-On-Chip design resulting in a compact and lightweight main unit, low power consumption (5V DC, around 1 watt) and low noise level (no cooling hardware required).
8. Used embedded operating system, no need for hard drives so to provide a highly stable platform.
9. Supervised by hardware watchdogs, capable of self-restarting. Designed to be run 24/7/365.
10. Provide a total of 6 serial ports for multiple input and output connections.
11. Functions shipped with each unit are licensed to its own unique serial number so a system consists of multiple hosts and clients can be pre-configured before delivery. Providing ease of installation and reduce errors on site.
