

Lynn Valley Care Centre

We have provided a communications solution for the Lynn Valley Care Centre & Lodge. The details are as indicated below. The facility offers 194 Mixed Beds ranging from care to assisted types. This is a 3 Phase Plan.

Phase 1:

We have completed the first phase of this project which involved renovating the existing 84 Bed Lodge Nurse Call system. We have installed single patient stations with staff presence, bath stations and Dome Lights. We have 1 Traditional Master and CID based interface to the Avaya PBX System (Existing) for linking to existing SpectraLink Phones.

Phase 2:

We have completed the second phase of this work within a new 5 Floor building. We have installed our main controllers and pocket pager solution. We have temporarily connected the Lodge Nurse Call to create one complete system. We are using 1 Touchscreen Master along with Satellite Masters per floor. We have single patient stations as well as some double bed stations along with staff presence, bath and Dome lights.

We have also installed a Spectrum 520 Paging system within the new facility. We chose the 520 for zone paging and music distribution as well as Entry intercom and manual door release abilities. The power of being able to deploy a console anywhere we can get a cat 5 cables makes it a powerful option that our competition cannot deliver. Added that we can connect the 520 to a PBX via a caller ID unit allows staff to be mobile while answering the entry points of the facility. We have wired the building to allow for multiple zones for individual zone events or all call type events.

Phase 3:

This phase has yet to be started with the building still coming out of the ground. When it is complete, we will have a complete Nursecall system with Management software, Nurse Call CID based PBX interface, Pocket Pager, use of 3 types of masters and 520 Paging with CID based Interface. The PBX will use trunk based routing of calls to specific hardwired and wireless phones.
